Skill Wallet Project

Import Data Using Transform Maps (Spreadsheet)

Objective: To import employee skill data from a spreadsheet into the Skill Wallet application using Import Sets and Transform Maps in ServiceNow.

1. Create the Skill Wallet Table

Create a table named **Skill Wallet** with fields: Employee Name, Employee ID, Skill, Skill Level, Certification, Experience, and Certification Date.

2. Prepare the Spreadsheet

Employee ID	Employee Name	Skill	Skill Level	Certification	Experience
SW001	Arun	Java	Advanced	Yes	3 Years
SW002	Priya	Python	Intermediate	Yes	2 Years
SW003	Kumar	SQL	Beginner	No	1 Year

3. Import the Spreadsheet

Go to **System Import Sets** → **Load Data**. Select the spreadsheet/CSV file, upload it, select or create the Import Set table, and submit.

4. Create a Transform Map

Go to **System Import Sets** → **Transform Maps**. Click **New**, select the source Import Set table and the target Skill Wallet table, then create the field mappings.

5. Field Mapping

Source Field	Target Field
Employee ID	Employee ID
Employee Name	Employee Name
Skill	Skill
Skill Level	Skill Level
Certification	Certification
Experience	Experience

6. Run the Transform

Open the Import Set, click **Transform**, select the Skill Wallet Transform Map, and run the transformation.

7. Verify the Data

Open the Skill Wallet table and verify that the spreadsheet records were imported correctly.

Result: The Skill Wallet project successfully imports employee skill information from a spreadsheet into the ServiceNow Skill Wallet table using Import Sets and Transform Maps.
